F1 - RANJIT

- Plant Habit** : Strong vigorous vine with more branching green to dark green foliage.
- Fruit** : Dark green fruit, spindle in shape, length 18 - 20 cms & weight 120 - 150 gm.
- Maturity** : 45 - 50 days after sowing.
- USP** : High yielding vigorous plant growth, suitable for summer and rainy season, prolific bearing and straight long fruit, resistance to P.M & D.M.

F1 - KASHISH

- Plant Habit** : Strong vigorous with good branching vines.
- Fruit** : Dark green colour, with spineless surface, spindle in shape, length 18 -20 cms & weight 100-120 gm.
- Maturity** : 50-55 days after sowing.
- USP** : High yielding vigorous plant growth, suitable for summer and rainy season, straight long fruit, resistance to P.M & D.M.

F1 - VISHESH

- Plant Habit** : High vigorous with dark green dense foliage.
- Fruit** : Dark green glossy colour, length 35-40 cms.
- Maturity** : 55-60 days after sowing.
- USP** : High yielding vigorous plant growth, suitable for summer and rainy season, resistance to P.M, D.M & heat.

TS - GREEN LONG

- Plant Habit** : Strong vigorous with dark green foliage & fast growing habit.
- Fruit** : Dark green colour fruits with prominent spines, medium long fruits, fruit length 18-20 cm, fruit weight 80-100 gm.
- Maturity** : 50-55 days after sowing.
- USP** : Suitable for summer and rainy season, prolific bearing and straight long fruit.

BOTTLE GOURD

VEENA

- Plant** : Vigorous growing vines and dark green foliage.
- Fruit** : Attractive uniform and cylindrical shape shiny green colour fruits.
- Maturity** : First picking 50-55 days from the date of sowing.
- Fruit** : Shiny green in colour and 55-60 cm long approx weight 1.25 kg to 1.5 kg.
- USP** : Early maturity with prolific bearing, good keeping quality & suitable for long distance transportation.

SHAIRA

- Plant** : Vigorous growing vines and dark green foliage.
- Fruit** : Attractive shiny green colour, bulb shape fruits.
- Maturity** : First picking 50-55 days from the date of sowing.
- Fruit** : Shiny green in colour approx weight 0.8 kg to 1kg.
- USP** : Early maturity with prolific bearing, good keeping quality & suitable for long distance transportation.

F1 - AKSHITA

- Foliage** : Vigorous vines with dark green foliage.
- Fruit** : Attractive shiny green cylindrical straight in shape with 40-45 cm long.
- Maturity** : 55-60 days after sowing.
- Fruit Weight** : 1Kg- 1.25 Kg.
- USP** : White an tender flesh with good quality, high yielding variety crop with longer shelf life & appropriate for long distance transportation.

F1 - SHABNAM

- Foliage** : Vigorous vines with dark green foliage.
- Fruit** : Attractive shiny green and bulb shaped.
- Maturity** : 50-55 days after sowing.
- Fruit Weight** : 0.800 Kg- 1.00 Kg.
- USP** : White an tender flesh with good quality, high yielding variety crop with longer shelf life & appropriate for long distance transportation.

BEET ROOT

TS - RUBY QUEEN

- Plant type** : Vigorous erect plant, green foliage with red tinge.
- Root** : Globe shaped deep red colour roots & dark red core, average weight 200 -250 gm.
- Maturity** : 75-80 days.
- USP** : Deep red inside without fiber development, good field holding, excellent test for salad.

KNOL KHOL

TS - DIKSHA

- Plant Habit** : Medium plant, less leaf.
- Fruit** : Flattish round knob, smooth skin with attractive green colour, uniform knob weight 200-250 gm.
- Maturity** : 55-60 days.
- USP** : High yielding variety, soft and crispy internal structure, good field standing ability very late pithiness.

ONION

COREL RED

- Bulb** : Uniform bulbs, round dark red.
- Fruit** : Flattish round dark red uniform bulbs, average weight 90-100 gm.
- Maturity** : Bulbs maturity after 100 -110 days of transplanting.
- USP** : Very good storage ability, medium to high pungency, high tolerance to bolting, excellent research variety.

BROCOLI

F1 - BARKHA

- Plant type** : Plant frame is medium to large erect dark green leaves.
- Fruit** : Very compact & has fine beads, weight 800 gm to 1 kg.
- Maturity** : 65-70 days after transplanting.
- USP** : High yielding, early maturity, can be planted in winter season in plain areas.

LONG MELON

BABITA

- Plant type** : Good vigorous vines with branches.
- Fruit** : Long straight type thin 40-45 cm.
- Maturity** : 40-45 days after sowing.
- USP** : High yielding, crispy in taste and has tolerance to disease & heat.

SNAKE GOURD

NAGESH

- Plant type** : Good vigorous vines with branches.
- Fruit** : Whitish thick short fruit weight 100-150 gms.
- Maturity** : 60-65 days after sowing.
- USP** : High yielding variety, good storage capacity.

CABBAGE

F1 - SIYA-101

- Plant Frame** : Medium size.
Head : Round, compact and dark green in colour, weight 1.3 to 1.5 kg.
Maturity : After 55 -60 days of transplanting.
USP : Good field holding, tolerance to black rot / yellow wilt, short core good internal structure, sweet & crispy in taste.

F1 - SAIRA

- Plant Frame** : Medium size plant frame with round light green leaves.
Head : Semi compact head average weight 800-950 gm.
Maturity : Can be harvested 50-55 days after transplanting.
USP : Ideal choice for long shipping, recommended for north east india, 6-7 days field holding capacity.

F1 - RESHAM

- Plant Frame** : Medium size.
Head : Green compact round head, bluish green in colour, weight 1.25 to 1.50 kg.
Maturity : After 55 -60 days of transplanting.
USP : Early maturity, very good internal structure, good field standing ability, heat tolerance.

TS - EARLY KUNWARI

- Plant type** : Erect small frame is medium to large semi erect dark green leaves.
- Curd** : Semi dome curd, white in colour, excellent uniformity, weight 400-500 gm.
- Maturity** : 55-60 days after transplanting.
- USP** : High yielding, cremish white in colour, good storage ability.

TS - POOSI

- Plant type** : Plant frame is medium to large erect dark green leaves.
- Curd** : Semi dome curd, excellent uniformity curd weight 1.5- 1.8 kg.
- Maturity** : 75-80 days after transplanting.
- USP** : High yielding, snow white in colour, good storage ability.

TS - MAGHI

- Plant type** : Plant frame is medium to large semi erect dark green leaves.
- Curd** : Semi dome curd, excellent uniformity curd weight 1- 1.5 kg.
- Maturity** : 80-90 days after transplanting
- USP** : High yielding, snow white in colour, good storage ability.

F1 - NATASH

- Plant type** : Strong vigorous plant, medium to large frame erect dark green leaves.
- Curd** : Very compact dome shape, snow white in colour, excellent uniformity curd weight 1.25-1.75 kg.
- Maturity** : 75-80 days after transplanting.
- USP** : High yielding, good storage ability.

CLUSTER BEANS

TS - VARSHA

- Plant type** : Erect plant with profuse bearing of pods in bunches.
- Fruit** : Medium green, smooth pods, pods length 12-14 cm.
- Maturity** : 45-50 days after sowing.
- USP** : High yielding, early maturity, short inter nodes, suitable for kharif & rainy season.

COWPEA

SARASWATI

- Plant type** : Dense foliage with dark green leaves.
- Fruit** : 2-3 cylindrical pods per inflorescence and light green in colour.
- Maturity** : The harvest starts 55-60 days after sowing.
- USP** : High yielding, early maturity, pod length 18-20 cm, short internod length, can be grown in kharif & rainy season.

SALAKHA

- Plant Habit** : Early maturity dwarf plant bears 2-3 green pods per inflorescence.
- Fruit** : Average pod length is 20-24 cm, glossy green in colour.
- Maturity** : The harvest starts 45-50 days after sowing.
- USP** : High yielding, early maturity, intermediate resistance for viral disease.

RIDGE GOURD

F1 - RATAN / TGS-1720

- Plant Type** : Strong vigorous plants with profolic and continuous bearing habit.
- Fruit** : Attractive dark green colour, 45-50 cm long 250-300 gm weight.
- Maturity** : Early maturity hybrid, ready for harvesting 40-55 days from the day of sowing.
- USP** : High yield potential with slow seed maturity and good keeping quality.

CUCUMBER

F1 - SHAAN

- Plant Habit** : Vigorous plant with dense foliage.
- Fruit** : Fruits are attractive, cylindrical with 20-22 cms length.
- Maturity** : 35-40 days after transplanting.
- USP** : High yielding, early variety with vigorous plant growth, good for long distance transportation, tolerance to powdery mildew/downy mildew.

F1 - AANIKET

- Plant Habit** : Vigorous plant with strong vines.
- Fruit** : Attractive dark green fruits, cylindrical with 18-20 cms length.
- Maturity** : 40 - 45 days after sowing.
- USP** : High yielding, early variety with vigorous plant growth, good for long distance transportation, tolerance to powdery mildew/downy mildew.

RONAK

- Plant Habit** : Vigorous green vines.
- Fruit** : Fruits are green, cylindrical with 18-20 cms, average weight of fruit is 160-180 gm.
- Maturity** : 40-45 days after sowing.
- USP** : High yielding variety, crispy fruits, suitable for summer and rainy season.

CORIANDER

GREEN AROMA

- Plant** : Vigorous Plant with bright green large leaves and excellent aroma.
- Colour** : Dark green
- Maturity** : 35-40 days after sowing.
- USP** : Multicut with round the year cultivation, excellent yield and good aroma.

SPINACH

TS ALL GREEN

- Plant** : Vigorous and erect uniform plant.
- Colour** : Dark green, no pigmentation.
- Maturity** : 35-40 days after sowing.
- USP** : Attractive green colour leaves & high yield variety.

PEA

TS10 (HARA MOTI)

- Plant** : Medium tall with well spread lateral branches.
- Fruit** : Shining dark green pods, 9-11 seeds per Pod.
- Maturity** : 80-85 days after sowing.
- USP** : Fruit length 7-8 cm, shiny green colour pods and high yield potential.

GREEN MIRACLE

- Plant** : Medium tall with well spread branches.
- Fruit** : Shining dark green pods, 8-10 seeds per pod.
- Maturity** : 70-75 days after sowing.
- USP** : Shiny green colour pods and high yield potential.

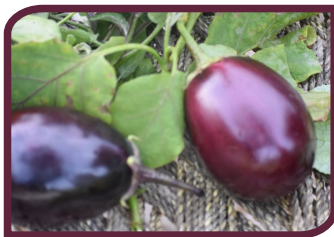

FRENCH BEAN

DEEPTI

- Plant** : Strong bushy, dwarf plant with dark green foliage.
- Fruit** : Green prolific, long 12-15 cm in length.
- Maturity** : 60-65 days after sowing.
- USP** : Early maturity white seeded variety, high yield & excellent in taste.

EGG PLANT

KOHINOOR

- Plant type** : Semi spreading Plant growth habit.
Fruit : Fruits are round with attractive shiny purple colour and green calyx, average fruit weight 250-300 gms.
Maturity : First picking-55-60 days after transplanting.
USP : High yielding, early maturity, short internod length.

F1 - UPKAR

- Plant type** : Semi erect medium tall, vigorous plant.
Fruit : Round with attractive shiny purple colour with green, average fruit weight 250-300 gms.
Maturity : First fruit picking 55-60 days after transplanting.
USP : High yielding, early maturity, short internod length, intermediate resistance for viral disease.

F1 - SAYA

- Plant Habit** : Semi erect tall plant with spreading habit.
Fruit : Long cylindrical attractive blackish dark purple colour with green and non spiny calyx, average fruit weight 100-150 gms.
Maturity : First fruit picking 55-60 days after transplanting.
USP : Good shining long fruit with low seed content, good keeping quality, high yielding and tolerant to heat.

F1 - HARSHA

- Plant Habit** : Tall vigorous plant with large canopy.
Fruit : Purple with white strips with green and non spiny calyx, average fruit weight 100-120 gms.
Maturity : First fruit picking 60-65 days after transplanting.
USP : Good shining oval shape fruit with low seed content, strong plant tolerant to bacterial wilt, good keeping quality.

HOT PEPPER

AVANTIKA

- Plant Habit** : Vigorous tall spreading plant, dark green leaves.
- Fruit** : Dark green wrinkled peppers fruits which ripen from lime green to orange and then to red, length 7-12 cm long.
- Maturity** : First fruit picking 60-65 days after transplanting and red to 85 days.
- USP** : Highly pungent good shelf life, an ideal chilli for flavouring Indian curries.

F1 - SOHINI

- Plant Habit** : Erect plant size with compact grow habit, good vigour, dark green leaves.
- Fruit** : Attractive light green wrinkled fruit length 10-12 cm, dia 1.1 -1.3 cm.
- Maturity** : First fruit picking 65-70 days after transplanting.
- USP** : Good virus & heat tolerant, highly pungent, green purpose good for shelf life.

F1 - APRAJITA

- Plant Habit** : Medium tall vigorous plant, dark green leaves.
- Fruit** : Medium green fruit length 8-10 cm, Dia 1.2-1.3 cm.
- Maturity** : First fruit picking 45-50 for green & 80-85 days for red after transplanting.
- USP** : Good virus & heat tolerant, anthracnose tolerance, pungent, green and red (Dry) purpose.

F1 - SHREEMAYA

- Plant Habit** : Strong erect plant, heavy bearing with close internod distance.
- Fruit** : Dark green fruit length 13-15 cm, dia 1.3-1.4 cm.
- Maturity** : First fruit picking 65-70 days after transplanting.
- USP** : Low to medium pungency, good shelf life, moderate heat set.

MUSKMELON

TS - MADHURAS

- Plant Habit** : Green and vigorous vine.
Fruit : Flattish round, yellowish green fruits with green stripes, flesh colour light orange, average fruit weight 800 gms -1 kg.
Maturity : 60-65 days after sowing.
USP : TSS 12-14 %, high yield, excellent, adaptability throughout country.

CARROT

TS - DESI RED

- Plant Habit** : Vigorous plant, erect leaves.
Root : Dark red roots, 30-35 cm length, weight 125-150 gms.
Maturity : 85-90 days from the date of sowing.
USP : Roots have self coloured core and uniform, juicy & smooth, excellent shelf life & late bolter tendency.

TS- EARLY NANTES

- Root** : Cylindrical long root, 14-16 cm in length.
Colour : Orange self coloured core.
Maturity : 95-100 days after sowing.
USP : Flesh with fine texture and late bolting without cracking.

ROUND GOURD

DEVMANI

- Plant Habit** : Vigorous vines with glossy colour.
Fruit : Light green to green round in shape with 80-90gm weight.
Maturity : 45-55 days.
USP : High fruiting & yield with, excellent in taste and tender fruits, tolerance to wilt disease.

HEER

- Plant Habit** : Vigorous medium tall plant with excellent branches and short internodes.
- Fruit** : Lush green colour with fruit length of 9-11 cm.
- Maturity** : 45-50 days after sowing.
- USP** : Short inter node, high yield, best for long distance transportation.

F1 - SAMRIDHI

- Plant Habit** : Tall vigorous plant with excellent branches and short internodes.
- Fruit** : Attractive glossy green colour with fruit length of 13-14 cm.
- Maturity** : 45-50 days after sowing.
- USP** : Intermediate resistance to YVMV & ELCV, high yield, best for long distance transportation.

F1 - KAREENA

- Plant Habit** : Tall vigorous plant with excellent branches and short internodes.
- Fruit** : Attractive dark glossy green colour with fruit length of 13-15 cm.
- Maturity** : 45-50 days after sowing.
- USP** : Tolerance of heat, YVMV, ELCV, high yield variety, best for long distance transportation.

PUMPKIN

F1 - J ACKOB

- Plant** : Vigorous plant grow with strong vines.
Fruit : Mottled green flattish round with raised ridges, weight 5-7 Kg.
Maturity : 100-110 days after sowing.
USP : Very attractive medium size, high yielding variety.

F1 - SRABJIT

- Plant** : Vigorous Plant grow with strong vines.
Fruit : Mottled green skin colour flat shaped with ridged, weight 5-7 Kg.
Maturity : 100-110 days after sowing, standing ability 75-85 days.
USP : Very attractive medium size, high yielding variety.

F1 - GR- SUCHITA

- Plant** : Vigorous Plant grow with strong vines.
Fruit : Semi flat round black colour fruits, weight 5-6 Kg.
Maturity : 90-100 days after sowing, standing ability 75-85 days.
USP : Very attractive medium size, high yielding variety.

F1 - TS 1116

- Fruit** : Oblong and long shape.
Fruit weight : 7-8 Kg.
Maturity : 100-110 days after sowing.
USP : Vigorous prolific continuous bearing with good fruit set with thick flesh, excellent shelf life.

RADISH

TS - CHETKI LONG

- Leaf** : Green and erect, helps in easy uprooting.
Root : Pure white in colour, 25-30 cm long and slightly pungent.
Maturity : 35-45 days after sowing.
USP : Suitable for summer and rainy season in tropical and sub tropical regions, late pithiness and bolting tolerance.

TS - HILL QUEEN

- Leaf** : Dark green serrated leaves.
Root : Root shape cylindrical, pure white in colour, 40-45 cm long.
Maturity : 55-60 days after sowing.
USP : Root pithiness very late bolting tolerance, suitable for planting in july to november, fetches premium prices in market.

TS - MINO EARLY WHITE

- Leaf** : Dark green shiny and serrated leaves.
Root : Pure white in colour, 40-45 cm long.
Maturity : 45-50 days after sowing.
USP : Suitable for summer and cold season, very late pithiness, very small foliage.

TS - PALAK PATTI

- Leaf** : Green to dark green soft and smooth leaves.
Root : Pure white in colour, 25-30 cm long, good in taste.
Maturity : 35-40 days after sowing.
USP : Suitable for summer and rainy season, very tasty roots and leaves can be consumed.

F1 - WHITE GOLD

- Leaf** : Dark green with serrated margins.
Root : Pure white in colour, 35-40 cm long.
Maturity : 45-50 days after sowing.
USP : Suitable for kharif & rabi season sowing, weight 250-400 gms.

SPONGE GOURD

SHYAMALI

- Plant Type** : Vigorous growing vines with dense covering foliage.
- Fruit** : Dark Green Colour, 25-30 cm long cylindrical fruits.
- Maturity** : 50-55 days from the date of sowing.
- USP** : High yield potential and good storage capacity.

RESHMA

- Plant Type** : Vigorous growing vines with dense covering foliage.
- Fruit** : Light green colour, 25-30 cm long cylindrical fruits.
- Maturity** : 50-55 days from the date of sowing.
- USP** : High yield potential and good storage capacity.

F1 - SHYAMA

- Plant Type** : Vigorous growing vines with dense covering foliage.
- Fruit** : Dark green colour, 20-25 cm long with 100-150 gm weight.
- Maturity** : 45-50 days to first picking (early maturity).
- USP** : Long attractive fruit, good keeping quality, high yielding variety.

F1 - SONALI

- Plant Type** : Vigorous growing vines with dense covering foliage.
- Fruit** : Light green colour, 28-30 cm long with 120-150 gm weight.
- Maturity** : 45-50 days to first picking (early maturity).
- USP** : Long attractive fruit, good keeping quality, high yielding variety.

F1 - LADDU

- Plant Habit** : Interminate tall vigorous plant, medium foliage cover.
- Fruit** : Dark red oblate shaped fruit weight 90-100 gms.
- Maturity** : First harvest 70-80 days after transplanting.
- USP** : An outstanding high yielding variety, good storage capacity and suitable for long distance transportation.

F1 - RAEES

- Plant Habit** : Vigorous vines, semi determinate plants with broad leaves & good foliage cover.
- Fruit** : Dark red oval shaped fruits weight 90-100 gms.
- Maturity** : First harvest 60-65 days after transplanting.
- USP** : An outstanding high yielding variety, tolerance of the bacterial wilt, leaf coloring virus, suitable for long distance transportation.

F1 - TGS 3101 DESI

- Plant Habit** : Determinate plant habit with dark green thick leaves.
- Fruit** : Deep oblate shaped red colour with green shoulder, fruit weight 90-100 gm.
- Maturity** : First harvest 60-65 days after transplanting.
- USP** : Tolerance to TLCV, good acidic taste, an outstanding high yielding variety.

WATERMELON

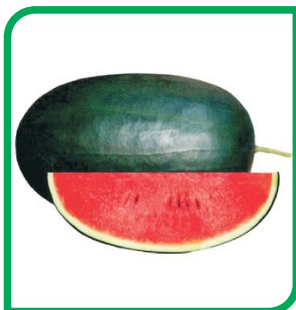

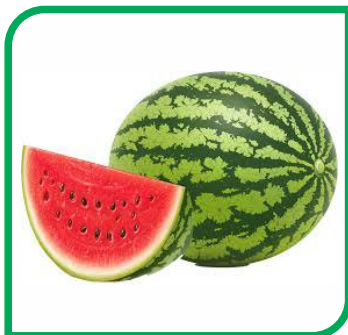

TS - MITHAS

- Plant Habit** : Vigorous vines, prolific and easy to fruit shape.
- Fruit** : Globe shaped fruits are dark green in colour, weight 7-8 kgs.
- Maturity** : First harvest 80-85 days after sowing.
- USP** : Dark red flesh texture and 12-13 % TSS, good for long distance transportation.

F1 - BHISHMA

- Plant Habit** : Vigorous vines, prolific and easy to fruit shape.
- Fruit** : Very uniform large oblong shape fruit have light green with dark green strips, weight 8-10 kgs.
- Maturity** : First harvest 75-80 days after sowing.
- USP** : Dark red flesh texture and 12-13 % TSS, good for long distance transportation, an outstanding high yielding early maturity.

F1 - ONYX 20

- Plant Habit** : Vigorous vines.
- Fruit** : Very uniform oblong shape fruit have light green with dark green strips, weight 4 - 5 kgs.
- Maturity** : First harvest 65-70 days after sowing.
- USP** : Dark red flesh texture and 13-14 % TSS, good for long distance transportation, small seed and high TSS .

F1 - TGS - SWEET BABY

- Plant Habit** : Vigorous vines strong, flowering & excellent fruiting habit.
- Fruit** : Uniform oblong shape fruit, weight 4-4 kgs, black with waxy skin.
- Maturity** : First harvest 70-80 days after sowing.
- USP** : Dark red flesh texture and 13-14 % TSS, small seed, good for long distance transportation, an outstanding high yielding variety.

SWEETCORN

HYB - MITHU

- Plant type** : Good vigorous plant with 5-6 feet height.
- Fruit** : Golden colour cobs with length of 18-22 cm width 5 cm, average cob weight 250-300 gms.
- Maturity** : Cobs are ready for harvest after 65-70 days after sowing.
- USP** : High yielding variety, good sweetness with TSS of 13-15 %, good storage capacity.

CAPSICUM

WONDER GREEN

- Plant type** : Medium tall plant with dark foliage.
- Fruit** : Dark green, 3-4 lobed blocky fruits, weight 100-150 gms.
- Maturity** : 65-70 days after transplanting.
- USP** : High yielding variety.

UPCOMING CROPS

- Maize
- Bajra
- Mustard
- Canola
- Barsem
- Marigold
- Papaya
- Sesame etc.

PUSA-DECOMPOSER

Licensed by : **ICAR-IARI**

OUR COMPANY HAS TRAINED UNDER ICAR-IARI TO PROMOTE PUSA DECOMPOSER

- ◆ Decomposer can decompose different types of agricultural biomass.
- ◆ Its increases value of soil nutrition and fertility.
- ◆ It helps to convert animal dung in to the manure in short period.
- ◆ It allows organic material to be recycled in an ecosystem.
